ELAN Avalanche System v. 2.0.0.165

Release notes

Job Creation Utility

- **Improvement:** Reorganized continuous mode progress window to improve user experience.
- **New:** Added continuous mode total report allowing to show summary information for the all the iterations.
- **New:** Added report log filter control allowing to filter log records by the message, minimal and maximal start time, and the result of extraction.
- **Improvement:** Made periodic folder scan and manual refresh options inactive when continuous mode is in progress. The folder scan is always performed once before each iteration of job creation.
- **Known issue:** Crash rarely occurred on continuous mode is still actual. The reason is yet to be found. Work in progress.

Database Administrator

- **Improvement:** Added the possibility to drop the current database schema.
- **Fixed:** Updating database schema when the application is started will now work properly when the schema is corrupted.

Quality Control

- **Existing issue:** A job with high number of files (more than 2 mln files) may fail to open in the QC interface. Work in progress.

System Monitor

- **New:** Added "HFS is not OK" email notification

Help

- **Update:** Reflected the latest modifications in DA and JCU
